Strategy Studio: HotspotAdapter (Market Data)

HotspotAdapter is Strategy Studio's market data adapter for currency pair data available from Hotspot, providing full-depth market data.

This data adapter may be selected by adding the following setting to the server's main configuration file:

> **PRIMARY_ADAPTER= HotspotAdapter**

Session Level Settings

Adapter settings are set in the server's main configuration file. Notable settings include:
> **HOTSPOT_SERVER=*host***
>   • Required. Specifies the IP address of the Hotspot market data server.
> **HOTSPOT_PORT=*port***
>   • Required. Specifies the IP port of the Hotspot market data server.
> **HOTSPOT_USER=*user_name***
>   • Required. This corresponds to a Hotspot account and will be provided by Hotspot.
> **HOTSPOT_PASSWORD=*password***
>   • Required. This will be provided by Hotspot.
> **ADAPTER_LOG_LEVEL=<*DEBUG | INFO | WARN | ERROR | FATAL*>**
>   • *(Optional). Sets the minimum at which messages from the adapter will be logged. Default is DEBUG.*
>   • *If set to DEBUG, all incoming messages from Hotspot will be logged in raw form.*
